SHORTENED STATUTORY PERIOD OF RESPONSE	NOTIFICATION DATE	DELIVERY MODE
3 MONTHS	02/08/2007	ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Notice of this Office communication was sent electronically on the above-indicated "Notification Date" and has a shortened statutory period for reply of 3 MONTHS from 02/08/2007.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

jcarter@kmob.com
eOAPilot@kmob.com

Office Action Summary

Application No.

10/057,001

Applicant(s)

Examiner

OJO O. OYEBISI

Art Unit

3692

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 November 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 12-27 and 32-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 12-27 and 32-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 01/25/02 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Applicant's election without traverse of Group II (claims 12-27, and 32-34) in the reply filed on 11/30/06 is acknowledged.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 12-27, and 32-34 rejected under 35 U.S.C. 102(e) as being anticipated by Page (US PAT: 6,464,134).

Re claims 12-16, 22-24. Page discloses a method of processing a check transaction, the method comprising: receiving an indication that a first check transaction from a first payor failed to clear at least in part because a first account number associated with the first check is erroneous (i.e., generate a non-verification signal, see col.4 lines 55-65); locating a separate identifier for the first payor; locating a first previously cleared check transaction associated with the separate identifier; reading a second account number (i.e., second set of data, see col.4 lines 35-50, also see the abstract) the second account number associated with the first previously cleared check transaction; comparing at least the first account number (i.e., a first set of data, see col.7 lines 30-

Art Unit: 3692

35) with at least the second account number (see col.7 lines 28-40); and determining if the second account number meets a first criteria (i.e., positive comparison, see col.1 lines 5-18) which thereby indicates the second account number is potentially a correct version of the first account number (i.e., Preferably, the payee data includes at least the name or other identification of the payee and/or the dollar amount or value of the check.

Along these lines, the issuing terminal 10 preferably includes a printer or like printing facility 22, so as to produce any desired hard copy records of any data entered into and stored in the memory facilities of the issuing terminal 10 relating to the one or more checks being processed. The processing center 12, which may be integral with or remote from the issuing and/or cashing terminals 10 and 14, is preferably computer oriented and includes a central processing unit or like facilities 24 having the ability to receive data from a plurality of different sources, at least temporarily store such data, and readily access such data, specifically but not exclusively for purposes of comparing various sets of data, at least in terms of corresponding content. More specifically, and as explained in greater detail with reference to FIG. 2, a first set of data relating to a particular bank check issued by the issuing terminal 10 and communicated and stored in the processing center 12, would be compared, as to its content, with a second set of data, received from the cashing terminal 14, and relating to the same bank check, when such bank check is presented for redemption at the site of the cashing terminal 14. In addition to the above, the processing center 12 should also be capable of communication between the issuing terminal 10 as at 28 and the

Art Unit: 3692

cashing terminal 14 as at 30, see col.7 lines 15-40) (see the abstract, also see the summary of the invention).

Re claim 17. Page further discloses the method, further comprising

submitting the first check transaction for clearance using the second account number (i.e., second set of data, see col.7 lines 30-40).

Re claims 18, 19. Page further discloses the method, wherein the separate identifier is a driver license number (i.e., see col.1 lines 35-40).

Re claims 20, 21. Page further discloses the method, wherein the separate identifier is a social security number (i.e., page discloses individualized payee data which inherently encompasses social security number or any individualized data for that matter, see col.3 lines 34-43)

Re claim 25. Page further discloses the method, wherein the first account number was read magnetically and converted to characters (i.e., scanner, see col.6 lines 55-65)

Re claim 26. Page further discloses the method, wherein the first account number was manually entered into a form (see col.4 lines 25-40).

Re claim 27. Page further discloses the method, wherein the first account number was read optically and converted to characters (see col.6 lines 55-65).

Re claims 32, 33-34. Page further discloses an apparatus configured to process check data, the apparatus comprising: a first instruction stored in computer readable memory, the first instruction configured to read an indication that a first check from a first payor failed to clear because MICR data associated with first check is incorrect

Art Unit: 3692

(i.e., non-verification see col.1 lines 5-16); a second instruction stored in computer readable memory, the second instruction configured to read a personal identifier associated with the first payor, wherein the personal identifier was provided in association with the first check (i.e., individualized payee data, see col.3 lines 34-43); a third instruction stored in computer readable memory, the third instruction configured to locate MICR data associated with a previously processed check associated with the personal identifier; a fourth instruction stored in computer readable memory, the fourth instruction configured to compare at least a portion of the located MICR data with at least a portion of the MICR data associated with the first check (see col.1 lines 1-20); and a fifth instruction stored in computer readable memory, the fifth instruction configured to determine if the portion of the located MICR data is at least a potentially correct version of the portion of the MICR data associated with the first check based at least in part on the comparison (i.e., Preferably, the payee data includes at least the name or other identification of the payee and/or the dollar amount or value of the check. Along these lines, the issuing terminal 10 preferably includes a printer or like printing facility 22, so as to produce any desired hard copy records of any data entered into and stored in the memory facilities of the issuing terminal 10 relating to the one or more checks being processed. The processing center 12, which may be integral with or remote from the issuing and/or cashing terminals 10 and 14, is preferably computer oriented and includes a central processing unit or like facilities 24 having the ability to receive data from a plurality of different sources, at least temporarily store such data, and readily access such data, specifically but not exclusively for purposes of comparing

Art Unit: 3692

various sets of data, at least in terms of corresponding content. More specifically, and as explained in greater detail with reference to FIG. 2, a first set of data relating to a particular bank check issued by the issuing terminal 10 and communicated and stored in the processing center 12, would be compared, as to its content, with a second set of data, received from the cashing terminal 14, and relating to the same bank check, when such bank check is presented for redemption at the site of the cashing terminal 14. In addition to the above, the processing center 12 should also be capable of communication between the issuing terminal 10 as at 28 and the cashing terminal 14 as at 30, see col.7 lines 15-40) (see the abstract, also see the summary of the invention).

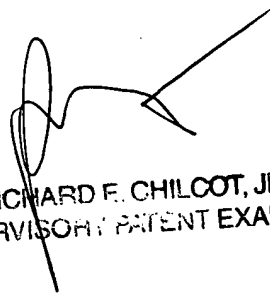

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to OJO O. OYEBISI whose telephone number is (571) 272-8298. The examiner can normally be reached on 8:30A.M-5:30P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RICHARD E. CHILCOT can be reached on (571)272-6777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
